

Bamboo Life

The first Bamboo Charcoal
made in New Zealand
with bamboos grown in NZ

Bamboo Life is the brand name of Bamboo Charcoal Products by Globalife.

TAKESUMI

(Mysterious Bamboo Charcoal)

“Takesumi” is the Japanese word for bamboo charcoal (Take=bamboo, Sumi=charcoal). It is a charcoal but not just a fuel. Takesumi has been used in Japan and has become prominent recently for its magic power. It is very versatile. Here are the mysterious powers of Takesumi, bamboo charcoal.

1. Purifying, Deodorant, and Dehumidification

Takesumi has a similar function to wood charcoal but its power is much stronger. Takesumi has 10 times more holes on it compared with wooden charcoal. When you put some pieces in drinking water, it takes the chemical residue from the water and releases its rich minerals into the water. It makes the taste of the water far better.

Takesumi also has a deodorant function like activated carbon. If you put it in a refrigerator, it will reduce the smell. We had an experimental outdoor toilet with just Takesumi powder. It does not have any flushing function and it does not smell at all.

Takesumi has a dehumidification effect as well. If you lay Takesumi powder in the store room, it will reduce the humidity as well as the smell. In Japan, it has been very popular to lay Takesumi (or wooden charcoal) underneath the floors of houses. It reduces the humidity in the house. It reduces the damage from insect attack. It also has healing power with its energy field of negative Ions.

2. Agricultural and Pastoral Use

Takesumi has been used a lot for agriculture and raising stock in Japan. If you apply Takesumi or Takesumi powder in the soil, it will increase the numbers and activity of micro-organisms. Takesumi has got many holes on it and it will become an attraction for bacteria. (1g piece of bamboo charcoal has the same surface as one tennis court.)

“Take-Su” is a bamboo vinegar. It is produced during the process of making charcoal by cooling the smoke. It is acidic and has a miracle power in various areas. It revives the power of plant life, of animals and of course of humans, too. If you apply Takesu on your plants, it will strengthen them. If you give it to animals, they will become healthier. If you get sick, you can even drink Takesu and it will recover your health. Takesu also has repressive effect on insects, so you can use it as an organic insecticide for your vege garden.

There are many farmers in Japan who feed charcoal to their livestock. It strengthens the health of the animals and also enhance the taste of their meat. You can easily test it by not mixing Takesumi in the feed but giving it instead separately. If their health condition needs charcoal, they will eat it. Of course, Takesumi is good for your pet, too.

3. Health Recovery and Healing

This is the biggest power of Takesumi which has been making Takesumi popular in Japan. Takesumi releases minus ions into the air and it will make you feel good. Takesumi also has a very strong energy field which causes many mysterious effects. It may have a good vibration for lives. It is said that Takesumi has a power to set everything in a good balance, not having the power to make things changed to one direction. It is Takesumi’s function to get everything back to the most well-balanced position. This is why there is no harm.

If you get sick, you can take Takesumi or Takesu to recover your health. It enhances your healing power. There have been many reports that even very bad cancer has been remedied.

One of the pro-soccer teams in Japan, “Jubiro Iwata” is using Takesumi a lot. They laid Takesumi under the soccer ground. This is of course good for the lawn but it also gives a good feeling to the players. They use Takesumi and Takesu when the players get injured. One of the famous players once broke a bone. He applied Takesumi on his injury and had an incredibly quick recovery.

Takesumi is conducted when it's produced with high temperature over 1000 degrees C resulting in many miraculous functions possibly of magnetic power. It may be explained in the future using the theory of Photon or Graviton. However, it actually has many more mysterious powers than the functions explained scientifically.

“Shikitan”

Shikitan has become very popular in Japan. In new building houses or old houses, Takesumi and/or Takesumi powder is laid underneath the floors of a house. Wooden charcoal also can be used for Shikitan which has lots of merits.

- ◆ Giving a healing field to the house
 Good sleeping, Comfortable Living, etc.
- ◆ Dehumidifying the house
 Avoiding fungus, damaging of the house, etc.
- ◆ Giving a preventive in case of insect invasion.
 Termites are a serious problem in Japan as there are many wooden houses.

The application of Takesumi is designed according to the plan of the house by a special method similar to “Feng Shui”.

Introductions of Takesumi Products (Some products are not developed by Globalife.)

A. Takesumi Stick

A stick of Takesumi is very versatile. When you put it in your drinking water, it enhances the taste. Put some pieces in a drink bottle and fill water. Leave it for 4 to 5 hours and you will produce very nice water. In Japan, we put one piece in a rice cooker. If you put one piece in a frying oil of Tempura, you will get a fine fried Tempura.

Put some pieces in your toilet to reduce the smell. Put some pieces in your bed room. You will sleep comfortably. If you are injured, apply one piece on your wound and it will reduce the pain.

B. Take-Su (Bamboo Vinegar) -original liquid-

C. Take-Su (Bamboo Vinegar) –distilled-

Take-Su is a vinegar made from bamboo charcoal. It is an essence of bamboo and is made by cooling the smoke in the process of making charcoal. It has lots of mysterious powers and is even more versatile than Takesumi. The original liquid

is good for agriculture, deodorant use, insect invasion, etc. But it is most distilled for humans to drink.

Apply 1000 times expanded Takesu on your vegetable leaves. It avoids insects attack and also enhances plant health. Apply 1000 times of Takesu into the soil of the vege garden. It will enhance the soil structure by increasing micro-organisms.

When you bathe in a Spa, put some Takesumi sticks in a net and put it in the bath tab. Also add 10 to 20cc of Take-Su in the water. It will improve your blood circulation and make you healthier. It is of course good for skin problems as well, and for allergies.

Take-Su is good for Asthma. Good for Hay-fever, too. Breathe the vapour of expanded Takesu. You can put it on your hands and scrub them. Cover your nose with your hands and breathe it. Or prepare an aromatherapy bowl with fire. Put 10 times the expansion of Takesu and boil it. We heard that there was a case of a patient with severe lung cancer who recovered by using this Takesu.

If you get any illness, just take Take-Su as it is or by expanding with water. If you do not like the smell and taste of Takesu, you can take it in a drink, juice, lemon tea, etc. Takesu is not a medicine. It just enhances your healing power. So you don't have to worry about its side effect. Take 1cc of Takesu with a glass of water everyday. You will get healthier power back. Good for injury, too. Just apply on your skin. Again, there is "No Harm".

If you have any odour problems, like a smelly compost, drainage, or toilet, just apply the original Takesu on it. It reduces the smell.

D. Takesumi Powder

Powdered Takesumi is good for agriculture and gardening. Mix it into the soil to enhance the soil structure. (Please be careful not to use too much if you want to keep a higher pH. It will reduce pH (alkalizing the soil).)

You can apply Takesumi powder for deodorizing. You can even eat since it is a very fine powder, good for mixing in a bread or noodles and other cooking. They last longer and taste better. Of course, they will be good for your health, too.

E. Takesumi Brick Ball

One of our unique products is Takesumi Brick Ball which we named "Tama Renga". This brick ball is made by mixing Takesumi ash, Takesu (Bamboo Vinegar), clay, and some other additions with same ratio (this

is important.) and bake it in the charcoal kiln. As it is baked, it will stay in the water. It holds lots of micro-organisms in it and makes the water of rivers, ponds, lakes, streams, etc. clean and beautiful. To keep the beautiful nature, it would be good to spread billions of Takesumi brick balls in all the water sources in NZ. Of course, it will enhance the creature's lives in the oceans, too.

F. Takesumi Mad Ball

Another unique product is Takesumi mad ball. We call it "Kaguya Dango". It is made by the same process as Brick Ball but it is not fired. So it is dissolved with water.

These balls are for the soil. If you put some balls under a tree which is dying, it may revive, not only by enhancing the soil structure, but by giving healing power to the tree. Some very unhealthy trees were recovered in 3 weeks. If you use it together with Takesu and Takesumi powder, the result will be much better.

G. Accessory

There are some accessory products, too. If you put our Takesumi pendant on your chest, you will feel better. Between your nipples, there is the thymus gland which controls your immunity system. Takesumi works on it and enhances the healing power. This place in the body is also known as the 4th Chakra of humans. Takesumi gives special energy to it. If you have a bracelet on your left arm, it will work well on your heart.
